EDUCATION

University of North Carolina at Greensboro

Aug 2022 — May 2026

Bachelor of Science, Computer Science

Greensboro, NC

- Coursework: Data Structures & Algorithms, Operating Systems, Software Engineering, Artificial Intelligence, Computer Architecture, Database Systems, System Programming, Big Data & Machine Learning, Data Science

Wayne Community College

Aug 2018 — May 2022

Associate of Arts

Goldsboro, NC

PROJECTS

GenieMart - UNCG Spartan Marketplace

Spring 2026

- Built a mobile marketplace app for the UNCG community using React Native (Expo Router), FastAPI, and PostgreSQL backend deployed on Render
- Owned the frontend auth layer, implementing JWT bearer token caching, login, registration, and email verification flows
- Built admin and user profile views, including profile management and user reporting features
- Designed RESTful API endpoints, SQLAlchemy ORM models, and Alembic data migrations
- Integrated Cloudflare R2 for image storage and collaborated via git feature branches.
- **Tech Stack:** Python, React Native, Expo, TypeScript, FastAPI, PostgreSQL, Render, Cloudflare R2

E-Commerce Platform

Fall 2025

- Built a full-stack e-commerce web application using PHP and the Laravel framework with a PostgreSQL database
- Designed a normalized relational schema using ER modeling and wrote raw SQL queries without an ORM
- Implemented authentication, dynamic content rendering, and database integration
- **Tech Stack:** PHP, Laravel, PostgreSQL, HTML, CSS

HomeOnTheGo - Short-Term Rentals Platform

Spring 2025

- Developed a full-stack rental platform with a Java Spring Boot REST API and a React (Vite) frontend
- Designed a relational database schema and integrated MySQL for persistent data storage
- **Tech Stack:** Java, Spring Boot, React, TypeScript, MySQL

Card Game - War

Spring 2025

- Modeled a 52-card deck and hand using OOP design with dynamic memory allocation and manual resource allocation
- Implemented turn-based logic and win/lose conditions for the human vs. computer play
- Applied RAII principles and destructors to prevent memory leaks across game state transitions
- **Tech Stack:** C++

System Programming Simulator

Spring 2025

- Simulated OS-level concepts including inter-process communication, multi-threaded execution, and memory management
- Implemented thread synchronization primitives and preventing race condition during concurrent execution
- **Tech Stack:** C, POSIX Threads

WORK EXPERIENCE

Crew Member

Jul 2021 — Jan 2026

Bojangles - Tands Inc.

Goldsboro, NC

- Trained and onboarded new crew members, ensuring adherence to service and food safety standards
- Operated both front-of-house and back-of-house positions, adapting quickly to shifting team needs
- Coordinated with a team of 10+ during high-volume service in a fast-paced environment

TECHNICAL SKILLS

- **Programming Languages:** Java, C, C++, Python, R, TypeScript, JavaScript, PHP, x86 assembly, HTML, CSS, Lua
- **Frameworks and Libraries:** React, React-Native, Spring Boot, Laravel, Expo, FastAPI, SQLAlchemy
- **Tools and Databases:** PostgreSQL, MySQL, Alembic, Git, Docker, Vite
